

Project Highlights

Wyomissing Borough | Berks County | 2019

Project Overview

Wyomissing Borough is known for their beauty & also their practical approach to pavement rehabilitation. For this

neighborhood, Wyomissing chose to reinvest in the existing pavement & subbase through Full Depth Reclamation (FDR) with cement.

Problem Solved

A road with high fatigue cracking shows signs of structural failure. This could be caused by an inadequate base or subbase, higher traffic loads than how the road was designed, or loss of base or subbase support.

Specifics & Technicalities

For this project, a 10" FDR was performed with Portland Cement.

Moving Forward

These roads have now structurally sound base & subbase to last 25 years. Curb reveal was restored and adequate cross slope was established to promote proper drainage.
